Coronavirus (COVID-19) - Update May 2020

ERNI manufactures its products - largely automated - mainly at its locations in Germany and Thailand. Currently, we still do not see any significant effects on our production and manufacturing processes due to the Coronavirus.

Our facilities in Europe and Thailand experiencing only minor disruptions to their operations, mainly driven by rules and regulations implemented by local authorities. Currently, there are only some delays due to reduced air freight capacities and more difficult goods transport in Europe. ERNI does not plan to interrupt or suspend production lines; ERNI factories are operational and the supply chain is stable. In other words, ERNI continues to produce and deliver, and disruptions are limited to a few individual cases.

Regional and worldwide task force teams have been set up, which on the one hand strictly adhere to local legislation and on the other hand guarantee fast response times. In case of doubt, these rules are always interpreted with regard to the health of our employees. All precautionary measures introduced, such as the guidelines for personal hygiene at all ERNI locations are still being implemented.

We will continue to monitor and evaluate how the situation is evolving daily and are prepared to react accordingly to any changes.
